Introduction

Overview

The Goldman Sachs Group, Inc. (Group Inc. or parent company), a Delaware corporation, together with its consolidated subsidiaries (collectively, the firm), is a leading global financial institution that delivers a broad range of financial services to a large and diversified client base that includes corporations, financial institutions, governments and individuals. Goldman Sachs Group UK Limited (GSGUKL or the company) is a wholly owned subsidiary of Group Inc. When we use the terms "Goldman Sachs", "GS Group", "firmwide", and "the firm", we mean Group Inc. and its consolidated subsidiaries and when we use the terms "GSGUK", "we", "us" and "our", we mean GSGUKL and its consolidated subsidiaries.

The Board of Governors of the Federal Reserve System is the primary regulator of Group Inc., a bank holding company (BHC) under the U.S. Bank Holding Company Act of 1956 and a financial holding company under amendments to this Act. The firm is subject to consolidated regulatory capital requirements which are calculated in accordance with the regulations of the Federal Reserve System (Capital Framework).

GSGUK is supervised on a consolidated basis by the Prudential Regulation Authority (PRA), and as such is subject to minimum capital and liquidity adequacy standards. GSGUK's major subsidiaries are regulated by the Financial Conduct Authority (FCA) and the PRA and are subject to minimum capital and liquidity adequacy standards also on a standalone basis.

The capital requirements are expressed as risk-based capital and leverage ratios that compare measures of regulatory capital to risk-weighted assets (RWAs), average assets and off-balance-sheet exposures. Failure to comply with these capital requirements could result in restrictions being imposed by our regulators and could limit our ability to repurchase shares, pay dividends and make certain discretionary compensation payments. GSGUK's capital levels are also subject to qualitative judgements by the regulators about components of capital, risk weightings and other factors.

For information on Group Inc.'s financial statements and regulatory capital ratios, please refer to the firm's most recent Quarterly Pillar 3 Disclosures and Quarterly Report on Form 10-Q. References to the "Quarterly Report on Form 10-Q" are to the firm's Quarterly Report on Form 10-Q for the period ended March 31, 2026. All references to March 2026 refer to the period ended, or the date, as the context requires, March 31, 2026.

https://www.goldmansachs.com/investor-relations/financials/10q/2026/first-quarter-2026-10-q.pdf

GSGUK's consolidated regulatory capital requirement has been calculated in accordance with the U.K. capital framework prescribed in the PRA Rulebook and the U.K. Capital Requirements Regulation (CRR[1]), which is largely based on the Basel Committee on Banking Supervision's (Basel Committee) capital framework for strengthening international capital standards (Basel III). The Basel Committee is the primary global standard setter for prudential bank regulation. Basel III is structured around three pillars: Pillar 1 "minimum capital requirements", Pillar 2 "supervisory review process" and Pillar 3 "market discipline".

The quarterly Pillar 3 disclosures set out qualitative and quantitative elements for which more frequent disclosure is appropriate in accordance with the PRA Rulebook.

[1] In this document, the term 'CRR' refers to the onshored version of Regulation (EU) No 575/2013 of the European Parliament and of the Council of 26 June 2013, as amended by UK authorities including by way of PRA CRR rule instruments

GSGUK also publishes annual Pillar 3 disclosures and consolidated financial statements. The latest annual consolidated financial information for GSGUK is prepared in line with the recognition and measurement requirements of European Union (EU) adopted International Financial Reporting Standards (IFRS); these can be accessed via the following link:

https://www.goldmansachs.com/disclosures/index.html

Measures of exposures and other metrics disclosed in this report may not be based on IFRS, may not be directly comparable to measures reported in financial statements, and may not be comparable to similar measures used by other companies. These disclosures are not required to be, and have not been, audited by our independent auditors.

Basis of Consolidation

GSGUK is the holding company for a group that provides a wide range of financial services to clients located worldwide. The company's functional currency is U.S. dollars and these disclosures are prepared in that currency.

The following UK-regulated subsidiaries are included in the regulatory consolidation:

- Goldman Sachs International (GSI)
- Goldman Sachs International Bank (GSIB)

The scope of consolidation for regulatory capital purposes is consistent with the IFRS consolidation.

Following the exemption of GSGUK from the requirement to be an approved parent financial holding company, GSI is the CRR consolidation entity, meaning that GSI is responsible for compliance with requirements applicable to GSGUK on a consolidated basis.

The company is required to make certain capital disclosures on an individual or sub consolidated basis for significant subsidiaries. The significant subsidiaries of GSGUK are GSI and GSIB. GSI is the firm's broker dealer in the Europe, Middle East and Africa (EMEA) region. GSIB is a U.K.-domiciled bank involved in lending and deposit-taking activities, securities lending and a primary dealer for U.K. government bonds. The risk profile of GSGUK is materially the same as that of GSI and GSIB combined. Risk management policies and procedures are applied consistently to GSI, GSIB and to GSGUK as a whole. The remaining entities have minimal balance sheet activity and have not been determined material subsidiaries for the purposes of these disclosures.

Restrictions on the Transfer of Funds or Regulatory Capital within the Firm

Group Inc. is a holding company and, therefore, utilises dividends, distributions and other payments from its subsidiaries to fund dividend payments and other payments on its obligations, including debt obligations. Regulatory capital requirements, as well as other provisions of applicable law and regulations, restrict Group Inc.'s ability to withdraw capital from its regulated subsidiaries. Within GSGUK, capital is provided by GSGUK to subsidiary entities. Capital is considered transferable to other entities within GSGUK without any significant restriction except to the extent it is required for regulatory purposes.

For information about restrictions on the transfer of funds within Group Inc. and its subsidiaries, see "Note 20 "Regulation and Capital Adequacy" in Part I, Item 1 "Financial Statements (Unaudited)" and "Risk Management – Liquidity Risk Management" and "Capital Management and Regulatory Capital" in Part I, Item 2 "Management's Discussion and Analysis of Financial Condition and Results of Operations" in the firm's Quarterly Report on Form 10-Q.

Definition of Risk-Weighted Assets

The risk weights used in the calculation of RWAs reflect an assessment of the riskiness of our assets and exposures. These risk weights and exposures are based on either predetermined levels set by regulators or on internal models which are subject to various qualitative and quantitative parameters that are subject to approval by our regulators. The relationship between available capital and capital requirements can be expressed in the form of a ratio and capital requirements are arrived at by dividing RWAs by 12.5. In this document, minimum capital ratios set out in Table 1 are expressed including the impact of additional buffers.

Fair Value

Trading assets and liabilities, certain investments and loans, and certain other financial assets and liabilities, are included in our consolidated balance sheets at fair value (i.e., marked-to-market), with related gains or losses generally recognised in our consolidated statements of earnings and, therefore, in capital. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The use of fair value to measure financial instruments is fundamental to the risk management practices. The daily discipline of marking substantially all of our inventory to current market levels is an effective tool for assessing and managing risk and provides transparent and realistic insight into our inventory exposures. The use of fair value is an important aspect to consider when evaluating our capital base and our capital ratios as changes in the fair value of our positions are reflected in the current period's shareholders' equity, and accordingly, regulatory capital; it is also a factor used to determine the classification of positions into the banking book and trading book.

For further information about the determination of fair value under accounting principles generally accepted in the United States (U.S. GAAP) and controls over valuation of financial instruments, see "Note 3. Significant Accounting Policies" in Part I, Item 1 "Financial Statements (Unaudited)" and "Critical Accounting Policy – Fair Value" in Part I, Item 2 "Management's Discussion and Analysis of Financial Condition and Results of Operations" in the firm's Quarterly Report on Form 10-Q.

Banking Book / Trading Book Classification

The company has a comprehensive framework of policies, controls and reporting arrangements to meet the requirements of the CRR on the classification and treatment of positions in the banking book and trading book. In order to determine the appropriate regulatory capital treatment for our exposures, positions must be first classified as either banking book or trading book. Positions are classified as banking book unless they qualify to be classified as trading book.

Trading book positions generally meet the following criteria: they are assets or liabilities that are accounted for at fair value; they are risk managed using a Value-at-Risk (VaR) internal model; they are held as part of our market-making and underwriting businesses and are intended to be resold in the short term, or positions intended to benefit from actual or expected short-term price differences between buying and selling prices or from other price or interest rate variations[2]. Trading book positions are subject to market risk regulatory capital requirements, as are foreign exchange and commodity positions, whether or not they meet the other criteria for classification as trading book positions. Market risk is the risk of loss in value of these positions due to changes in market conditions. Some trading book positions, such as derivatives, are also subject to counterparty credit risk (CCR) regulatory capital requirements.

Banking book positions may be accounted for at amortised cost, fair value or in accordance with the equity method. Banking book positions are subject to credit risk regulatory capital requirements. Credit risk represents the potential for loss due to the default or deterioration in credit quality of a counterparty (e.g., an over-the-counter (OTC) derivatives counterparty or a borrower) or an issuer of securities or other instruments we hold.

Regulatory Developments

The company's businesses are subject to extensive regulation and supervision worldwide. Regulations have been adopted or are being considered by regulators and policy-makers. Given that many of the new and proposed rules are highly complex, the full impact of regulatory reform will not be known until the rules are implemented and market practices develop under the revised U.K. regulations.

Risk-Based Capital Ratios

In May 2025, the PRA proposed updates to Pillar 2A methodologies and guidance primarily to address the consequential impacts of its rules implementing the finalised revisions to the Basel III Capital Requirements set by the Basel Committee (Basel III Revisions)[3]. The PRA published final rules in May 2026 (phase 1)[4] and is expected to undertake a further review at the end of 2027 (phase 2).

In July 2025, the PRA published amendments to the large exposures framework and is expected to publish further rules in the second half of 2026[5]. The Bank of England also published its statement of policy on its approach to setting minimum requirement for own funds and eligible liabilities (MREL)[6]. Changes became effective January 1, 2026 and did not have a material impact.

In December 2025, the Bank of England Financial Policy Committee (FPC) published its updated assessment of bank capital requirements and identified areas for review, including the leverage ratio framework and the use of buffers. The FPC is expected to update on the next steps in its July 2026 Financial Stability Report.

In January 2026, the PRA issued final rules implementing Basel III Revisions with an effective date of January 1,

[4] See PRA Policy Statement PS15/26, May 2026
[5] See PRA Consultation Paper CP14/24 and Policy Statement PS14/25, July 2025
[6] See Amendments to the Bank of England's approach to setting MREL

2027[7]. These include new rules covering market risk, credit risk, CCR, credit valuation adjustment (CVA) risk, operational risk, securitisation and the output floor. As a U.K. subsidiary of a U.S. banking group, GSGUK is not expected to be subject to the output floor. The implementation of the internal model approach (IMA) for market risk is deferred to January 1, 2028.

In March 2026, the PRA published a policy statement on recognised exchanges policy and transfer of main indices[8], which is relevant for the use of assets for credit risk mitigation (CRM), liquidity risk, market risk and CCR purposes. New rules on recognised exchanges will become effective July 1, 2026, and are not expected to have a material impact.

In March 2026, the PRA also published a consultation on modernising the U.K. liquidity policy framework[9].

In December 2022, the Basel Committee published a final standard on the prudential treatment of crypto asset exposures. U.K. authorities are expected to consult on proposed rules implementing these Basel standards.

In July 2024, EU adopted rules to implement the Basel III Revisions, through amendments to the CRR and the Capital Requirements Directive (CRD), referred to as CRR III and CRD VI. CRD VI includes provisions which will restrict certain non-EU entities from providing core banking services, including lending, to EU clients.

GSGUK continues to evaluate the impact of these consultations and rules as they are finalised and implemented by the company.

Subsequent Noteworthy Events

The company has issued Additional Tier 1 (AT1) notes of $2 billion in May 2026 to support business growth. This issuance occurred post-balance sheet date and is not reflected in the reported capital ratios as of March 2026.

Business Environment

During the first quarter of 2026, global economic activity was generally impacted by geopolitical concerns, the outlook for inflation, a focus on investments in artificial intelligence and uncertainty in international trade policies (including tariffs). In the latter part of the quarter, the conflict in the Middle East generated heightened uncertainty, quickly resulting in market volatility, increased energy prices, lower equity markets and elevated concerns about the outlook for economic growth. These factors also weighed on the actions taken by central banks globally towards policy interest rates, including the Federal Reserve, the Bank of England and the European Central Bank holding rates steady during the quarter.

Attestation

To the best of our knowledge, we confirm that we have taken all reasonable measures to ensure that the information included in this disclosure complies with Section 4 of the CRR disclosure requirements as set out in the PRA Rulebook and has been prepared in accordance with formal policies and internal processes, systems and controls agreed at the management body level.

Petra Monteiro Chief Financial Officer	Lesley Steele Chief Risk Officer

Capital Framework

Capital Structure

For regulatory capital purposes, GSGUK's total available capital has the following components:

- Common Equity Tier 1 capital (CET1), which is comprised of common shareholders' equity, after giving effect to deductions for disallowed items and other adjustments;
- Tier 1 capital, which is comprised of CET1 capital and other qualifying capital instruments; and
- Tier 2 capital, which is comprised of long-term qualifying subordinated debt and preference shares.

Certain components of our regulatory capital are subject to regulatory limits and restrictions under the rules. In general, to qualify as Tier 1 or Tier 2 capital, an instrument must be fully paid and unsecured. A qualifying Tier 1 or Tier 2 capital instrument must also be subordinated to all senior indebtedness of the organisation.

Under the rules, the CET1 capital, Tier 1 capital and Total capital ratio requirements (collectively the Pillar 1 capital requirements) are supplemented by:

- A capital conservation buffer of 2.5% of RWAs, consisting entirely of capital that qualifies as CET1 capital.
- A countercyclical capital buffer of up to 2.5% of RWAs (and also consisting entirely of CET1 capital) in order to counteract excessive credit growth. The buffer only applies to the company's exposures to certain types of counterparties based in jurisdictions which have announced a countercyclical buffer. The countercyclical capital buffer applicable to the company could change in the future and, as a result, the company's risk-based capital requirements could increase or decrease.
- The individual capital requirement under Pillar 2A (an additional amount to cover risks not adequately captured in Pillar 1). The PRA performs a periodic supervisory review of GSI's and GSIB's Internal Capital Adequacy Assessment Process (ICAAP), which leads to a final determination by the PRA of individual capital requirement under Pillar 2A. The sum of Pillar 1 and Pillar 2A requirements is referred to as "Total Capital Requirement" or TCR and represents the minimum amount of capital the PRA considers that GSI and GSIB should hold at all times.

The PRA also defines the forward-looking capital requirements which represent the PRA's view of the capital that GSGUK would require to absorb losses in stressed market conditions to the extent not covered by the capital conservation buffer. This is known as Pillar 2B or the "PRA buffer" and is not reflected in the Key metrics table shown in Table 1 below.

Compliance with Capital Requirements

As of March 31, 2026, all of GSGUK's regulated subsidiaries had capital levels in excess of their minimum regulatory capital requirements.

Key Metrics

The table below represents an overview of the prudential regulatory positions as measured by key regulatory metrics for GSGUK, GSI and GSIB as at March 31, 2026, December 31, 2025, September 30, 2025, June 30, 2025 and March 31, 2025.

Table 1: Key Metric Template

$ in millions		As of March 2026			As of December 2025			As of September 2025			As of June 2025			As of March 2025

Notes:

1. GSGUK and GSI capital ratios have increased due to an increase in capital and a decrease in RWAs. The capital increase was driven by the inclusion of $1 billion profit for the quarter ended March 2026, which was partially offset by an increase in regulatory deductions, and a capital injection of AT1 notes of $1 billion and a decrease in RWAs is primarily driven by a decrease in Market RWAs.
2. GSIB capital ratios have decreased primarily driven by an increase in Market RWAs.

[1] The ratio reported is calculated as average of the monthly Liquidity Coverage Ratio for the trailing twelve months and may not equal the calculation of ratio using component amounts reported in "Total high-quality liquid assets" and "Total net cash outflows".

Minimum Requirement for Own Funds and Eligible Liabilities

Material subsidiaries of an overseas banking group at the consolidated level, such as GSGUK, are required to have sufficient own funds and eligible liabilities to meet internal MREL.

As of March 31, 2026, GSGUK had own funds and eligible liabilities in excess of its internal MREL requirements.

GSGUK's own funds and eligible liabilities key metrics are provided in Table 2.

Table 2: Own Funds and Eligible Liabilities

$ in millions	**As of March 2026**
	GSGUK
Total own funds and eligible liabilities	**$ 76,014**
Total RWA	315,675
Total own funds and eligible liabilities as a percentage of RWA	24.08%
Leverage Exposure	1,071,016
Total own funds and eligible liabilities as a percentage of leverage exposure	7.10%

Risk-Weighted Assets

RWAs are calculated based on measures of credit risk, market risk and operational risk. The tables below represent a summary of the RWAs and capital requirements for GSGUK, GSI and GSIB by type as at March 31, 2026 and December 31, 2025. Minimum capital requirements represent 8% of RWAs.

Table 3: Overview of RWAs

GSGUK

$ in millions		RWAs		Minimum capital requirements
		March 2026	December 2025	
1	**Credit risk (excluding CCR)**	**$ 47,168**	**$ 44,703**	**$ 3,773**
2	Of which the standardised approach	3,331	3,984	266
UK 4a	Of which equities under the simple risk weighted approach	347	1,295	28
5	Of which the advanced IRB (AIRB) approach	43,490	39,424	3,479
6	**Counterparty credit risk - CCR**	**$ 142,672**	**$ 137,836**	**$ 11,414**
7	Of which the standardised approach	13,124	11,547	1,050
8	Of which internal model method (IMM)	97,744	94,513	7,820
UK 8a	Of which exposures to a CCP	829	751	66
UK 8b	Of which credit valuation adjustment – CVA	22,931	23,764	1,834
9	Of which other CCR	8,044	7,261	644
15	**Settlement risk**	**$ 443**	**$ 685**	**$ 35**
16	**Securitisation exposures in the non-trading book (after the cap)**	**$ 433**	**$ 488**	**$ 35**
18	Of which SEC-ERBA (including IAA)	74	80	6
19	Of which SEC-SA approach	279	326	22
UK 19a	Of which 1250%/deduction	80	82	7
20	**Position, foreign exchange and commodities risks (Market risk)**	**$ 99,373**	**$ 113,776**	**$ 7,950**
21	Of which the standardised approach	36,258	60,123	2,901
22	Of which IMA	63,115	53,653	5,049
UK 22a	**Large exposures**	**-**	**-**	**-**
23	**Operational risk**	**$ 25,586**	**$ 25,586**	**$ 2,047**
UK 23b	Of which standardised approach	25,586	25,586	2,047
24	**Amounts below the thresholds for deduction (subject to 250% risk weight)**	**$ 1,703**	**$ 2,774**	**$ 136**
29	**Total**	**$ 315,675**	**$ 323,074**	**$ 25,254**

GSGUK's risk-weighted assets decreased from $323 billion in December 2025 to $316 billion in March 2026. The decrease in RWAs is driven by a decrease in market RWAs, partially offset by an increase in credit and CCR RWAs:

- GSGUK's credit RWAs (excluding CCR) increased from $45 billion in December 2025 to $47 billion in March 2026, driven by increased on-balance-sheet exposures.
- GSGUK's CCR RWAs increased from $138 billion in December 2025 to $143 billion in March 2026, primarily driven by increased securities financing transactions (SFTs) over the quarter.
- GSGUK's market RWAs under standardised approach decreased from $60 billion in December 2025 to $36 billion in March 2026, driven by decreased debt exposures due to IMA scope extension.
- GSGUK's market RWAs under IMA increased from $54 billion in December 2025 to $63 billion in March 2026, driven by increased exposure and heightened market volatility.

8	**RWAs at the end of the reporting period**	**$ 9,753**	**$ 28,040**	**$ 6,093**	**$ 4,383**	**$ 14,846**	**$ 63,115**	**$ 5,049**

Movement in risk levels (line 2 in Table 6) increased by $0.8 billion driven by higher exposure impacting comprehensive risk measure ($2.6 billion), increased corporate exposure impacting IRC ($1.6 billion), heightened market volatility impacting VaR ($1.4 billion), partially offset by decreased currency exposure impacting RNIVs (under ‘Other’, $4.8 billion).

Model updates/changes (line 3 in Table 6) are $0.9 billion mainly from SVaR driven by IMA scope extension.

Liquidity Risk

Overview

GSGUK is subject to the liquidity requirements as set out in the CRR disclosure requirements with regard to liquidity coverage requirement for credit institutions and other applicable guidelines as set by the PRA. When we use the term "liquidity standards", we refer to the aforementioned regulations. The liquidity standards set forth minimum liquidity levels designed to ensure that credit institutions and investment firms maintain adequate amount of liquid assets to withstand a 30 calendar-day stress scenario. This information should be read in conjunction with firm's Quarterly Report on Form 10-Q for the quarter ended March 31, 2026.

Liquidity Risk Management

Liquidity risk is the risk that we will be unable to fund GSGUK or meet our liquidity needs in the event of firm-specific, broader industry or market liquidity stress events. We have in place a comprehensive and conservative set of liquidity and funding policies. Our principal objective is to be able to fund GSGUK and to enable our core businesses to continue to serve clients and generate revenues, even under adverse circumstances.

We manage liquidity risk according to three principles: (i) hold sufficient excess liquidity in the form of global core liquid assets (GCLA) to cover outflows during a stressed period, (ii) maintain appropriate Asset-Liability Management, and (iii) maintain a viable Contingency funding plan.

For information about Group Inc.'s internal Liquidity Risk Management framework, see "Risk Management – Liquidity Risk Management" in Part I, Item 2 "Management's Discussion and Analysis of Financial Condition and Results of Operations" in the firm's Quarterly Report on Form 10-Q.

Corporate Treasury is responsible for GS Group's liquidity, including developing and executing GS Group's liquidity and funding strategy and policies.

Liquidity Risk, which is part of the second line of defence and reports to the firm's Chief Risk Officer (CRO), has primary responsibility for independently assessing, monitoring and managing GS Group's liquidity risk by providing independent oversight and challenge across GS Group's global business.

The company's framework for managing liquidity risk is consistent with, and part of, the GS Group framework. We use liquidity limits at various levels and across liquidity risk types to manage the size of our liquidity exposures. Limits are measured relative to acceptable levels of risk given our liquidity risk tolerance. The purpose of these limits is to assist senior management in monitoring and controlling our overall liquidity profile.

The GSI and GSIB Board Risk Committees approve the limits. Limits are reviewed frequently and amended, with required approvals, on a permanent and temporary basis, as appropriate, to reflect changing market or business conditions.

Limits are monitored by Corporate Treasury and Liquidity Risk. Liquidity Risk is responsible for identifying and escalating to senior management and/or the appropriate risk committee, on a timely basis, instances where limits have been exceeded.

Based on the results of our internal liquidity risk models, as well as consideration of other factors including, but not limited to, an assessment of our potential intraday liquidity needs and a qualitative assessment of the condition of the financial markets and GSGUK, we believe that our liquidity position as of March 31, 2026 was appropriate.

Compliance with Liquidity Requirements

The PRA Rulebook requires that a firm maintains a liquidity coverage ratio (LCR) that is no less than 100%. In addition, the PRA may require a firm to hold additional liquidity for risks not covered in the LCR, referred to as Pillar 2 risks. A firm's high-quality liquid assets (HQLA) is expected to be available for use to address liquidity needs in a time of stress, which could result in a firm's LCR dropping below the applicable requirement. The liquidity standards also set forth a supervisory framework for addressing LCR shortfalls that is intended to enable supervisors to monitor and respond appropriately to the unique circumstances that give rise to a firm's LCR shortfall.

This information is based on our current interpretation and understanding of the regulatory requirements and may evolve as we discuss the interpretation and application of these rules with our regulators. Table 13 (lines 1 through 23) presents GSGUK's LCR in the format provided in the PRA guidelines on LCR Disclosure. Tables 7 through 12 present a supplemental breakdown of GSGUK's LCR components. Tables 14 and 15 present the disclosure template for GSI and GSIB, respectively.

Liquidity Coverage Ratio

The liquidity standards require a firm to maintain an amount of HQLA sufficient to meet stressed net cash outflows (NCOs) over a prospective 30 calendar-day period. The LCR is calculated as the ratio of HQLA to NCOs.

The table below presents a summary of our trailing twelve months average monthly LCR for the period ended March 31, 2026.

Table 7: Liquidity Coverage Ratio

$ in millions	Twelve months ended March 2026
	Average Weighted
Total high-quality liquid assets	$ 115,444
Net cash outflows	$ 58,379
Liquidity coverage ratio[1]	198.26%

1. The ratio reported in this row is calculated as average of the monthly LCRs for the trailing twelve months and may not equal the calculation of ratio using component amounts reported in "Total high-quality liquid assets" and "Net cash outflows".

In the table above, the average weighted total HQLA balance reflects the application of haircuts prescribed in the liquidity standards as described in the HQLA section.

The average weighted total HQLA held by GSGUK is expected to meet the liquidity requirements set out in the Liquidity Coverage Ratio (CRR) Chapter of the PRA Rulebook as well as the additional requirements set by the PRA to cover Pillar 2 risks.

GSGUK's average monthly LCR for the trailing twelve-months period ended March 2026 was 198.26%. The NCOs largely consist of prospective outflows related to GSGUK's secured and unsecured funding, derivative positions and unfunded commitments. We expect business-as-usual fluctuations in our client activity, business mix and overall market environment to affect our average LCR on an ongoing basis.

See "High-Quality Liquid Assets" and "Net Cash Outflows" for further information about GSGUK's LCR.

High-Quality Liquid Assets

Total HQLA represents unencumbered, high-quality liquid assets held by a firm. The liquidity standards define HQLA in three asset categories: Level 1, Level 2A and Level 2B, and applies haircuts and limits to certain asset categories.

Level 1 assets are considered the most liquid and are eligible for inclusion in a firm's HQLA amount without a haircut or limit. Level 2A and 2B assets are considered less liquid than Level 1 assets and are subject to additional adjustments as prescribed in the liquidity standards. In addition, the sum of Level 2A and 2B assets cannot comprise more than 40% of a firm's HQLA amount, and Level 2B assets cannot comprise more than 15% of a firm's HQLA amount.

Table 7 presents a summary of the weighted average total HQLA held by GSGUK, calculated in accordance with the liquidity standards.

Our HQLA substantially consists of Level 1 assets and is diversified across our major operating currencies. Our HQLA is also substantially similar in composition to our GCLA.

For information about Group Inc.'s GCLA, see "Risk Management – Liquidity Risk Management" in Part I, Item 2 "Management's Discussion and Analysis of Financial Condition and Results of Operations" in the firm's Quarterly Report on Form 10-Q.

Net Cash Outflows

Overview

The liquidity standards define NCOs as the net of cash outflows and inflows during a prospective stress period of 30 calendar days. NCOs are calculated by applying prescribed outflow and inflow rates to certain assets, liabilities and off-balance-sheet arrangements. These outflow and inflow rates reflect a specific standardised stress scenario to a firm's funding sources, contractual obligations and assets over the prospective stress period, as prescribed by the liquidity standards. Due to the inherently uncertain and variable nature of stress events, a firm's actual cash outflows and inflows in a realised liquidity stress event may differ, possibly materially, from those reflected in a firm's NCOs.

To capture outflows and inflows that would occur within a 30 calendar-day period, the liquidity standards require that a firm's NCOs calculation reflects outflows and inflows based on the contractual maturity of certain assets, liabilities and off-balance-sheet arrangements. To determine the maturity date of outflows, the liquidity standards account for any option that could accelerate the maturity date of an instrument or the date of a transaction. Where contractual maturity is not applicable, the liquidity standards also set forth stressed outflow assumptions. In addition, the liquidity standards require a firm to recognise contractual outflows within a 30 calendar-day period that are not otherwise described in the liquidity standards and to not recognise inflows not specified in the liquidity standards. The inflows included in the NCOs calculation are subject to a cap of 75% of a firm's calculated outflows.

Table 7 above presents a summary of GSGUK's NCOs, calculated in accordance with the liquidity standards.

More details on each of the material components of our NCOs, including a description of the applicable sections of the liquidity standards, are described below.

In the tables referenced in the remainder of this section, unweighted balances reflect certain GSGUK's assets, liabilities and off-balance-sheet arrangements captured in the liquidity standards. Weighted balances reflect the application of prescribed outflow and inflow rates to these unweighted balances.

Unsecured and Secured Financing

Overview

Our primary sources of funding are deposits, collateralised financings, unsecured short-term and long-term borrowings (including funding from Group Inc. and affiliates), and shareholders' equity. We seek to maintain broad and diversified funding sources globally across products, programs, markets, currencies and creditors to avoid funding concentrations.

For information about Group Inc.'s funding sources, see "Balance Sheet and Funding Sources" in Part I, Item 2 "Management's Discussion and Analysis of Financial Condition and Results of Operations" in the firm's Quarterly Report on Form 10-Q.

Unsecured Net Cash Outflows

GSGUK's unsecured funding consists of a number of different products, including:

- Debt securities issued, which includes notes, certificates, commercial paper and warrants; and
- Savings, demand and time deposits from consumers and institutional clients, and through internal and third-party broker-dealers; and
- Funding from Group Inc. and affiliates.

GSGUK's unsecured debt and deposits are a source of funding for inventory, lending activity and other assets, including a portion of our liquid assets.

The liquidity standards require that the NCOs calculation reflects a firm's upcoming maturities of unsecured long-term debt and other unsecured funding products during a 30 calendar-day period, assuming no roll over of debt that matures.

The liquidity standards also prescribe outflows related to a partial loss of retail, small business and wholesale deposits.

Inflows from deposits placed with agent banks and lending activity are included as part of "Inflows from fully performing exposures" (see Table 8).

The table below presents a summary of GSGUK's NCOs related to our unsecured borrowing and lending activity, calculated in accordance with the liquidity standards.

Table 8: Unsecured Net Cash Outflows

$ in millions	Twelve Months ended March 2026	
	Average Unweighted	Average Weighted
Outflows		
Retail deposits and deposits from small business customers, of which:	**$ 38,043**	**$ 5,879**
Stable deposits	0	0
Less stable deposits	37,701	5,879
Unsecured wholesale funding, of which:	**$ 42,739**	**$ 36,398**
Non-operational deposits	37,614	31,273
Unsecured debt	5,125	5,125
Inflows		
Inflows from fully performing exposures	**$ 3,786**	**$ 990**
Net unsecured cash outflows/(inflows)[1]	**$ 76,996**	**$ 41,287**

1. Net unsecured cash outflows/(inflows) reflects the subtraction of the inflow amounts from the outflow amounts shown in the table above and is included for illustrative purposes.

Secured Net Cash Outflows

GSGUK funds a significant amount of inventory on a secured basis, including repurchase agreements, securities loaned and other secured financings. In addition, we provide secured financing to our clients.

The liquidity standards consider outflows and inflows related to secured funding and securities services together as part of "Secured wholesale funding" and "Secured lending" (see Table 9).

Specifically, under the liquidity standards, secured funding transactions include repurchase agreements, collateralised deposits, securities lending transactions and other secured wholesale funding arrangements. Secured lending transactions, as defined under the liquidity standards, include reverse repurchase transactions, margin loans, securities borrowing transactions and secured loans.

The standardised stress scenario prescribed in the liquidity standards applies outflow and inflow rates between 0-100% to secured funding and lending transactions. Specific outflow and inflow rates are based on factors such as the quality of the underlying collateral, as well as the type, tenor, and counterparty of a transaction.

The table below presents a summary of GSGUK's NCOs related to our secured funding and lending activity, calculated in accordance with the liquidity standards.

Table 9: Secured Net Cash Outflows

$ in millions	Twelve months ended March 2026	
	Average Unweighted	Average Weighted
Outflows		
Secured wholesale funding		$ 61,006
Inflows		
Secured lending	558,631	156,114
Net secured cash outflows / (inflows)[1]		**$ (95,108)**

1. Net secured cash outflows/(inflows) reflects the subtraction of the inflow amounts from the outflow amount shown in the table above and is included for illustrative purposes.

Derivatives

Overview

Derivatives are instruments that derive their value from underlying asset prices, indices, reference rates and other inputs, or a combination of these factors. Derivatives may be traded on an exchange or they may be privately negotiated contracts, which are usually referred to as OTC derivatives. Certain OTC derivatives are cleared and settled through central clearing counterparties, while others are bilateral contracts between two counterparties.

GSGUK is exposed to derivative risk through:

- **Market-Making.** As a market maker, GSGUK enters into derivative transactions to provide liquidity to clients and to facilitate the transfer and hedging of their risks. In this role, we typically act as principal and are required to commit capital to provide execution, and maintain inventory in response to, or in anticipation of, client demand.
- **Risk Management.** GSGUK also enters into derivatives to actively manage risk exposures that arise from its market-making and investing and lending activities in derivative and cash instruments. Our holdings and exposures are hedged, in many cases, on either a portfolio or risk-specific basis, as opposed to an instrument-by-instrument basis. In addition, the firm may enter into derivatives that are used to manage interest rate exposure in certain fixed-rate unsecured long-term and short-term borrowings, and deposits.

We enter into various types of derivatives, including futures, forwards, swaps and options.

For information about Group Inc.'s derivative exposures and hedging activities, see Note 7 "Derivatives and Hedging Activities" in Part I, Item 1 "Financial Statements (Unaudited)" in the firm's Quarterly Report on Form 10-Q.

Derivative Net Cash Outflows

The liquidity standards require that derivative NCOs reflect outflows and inflows resulting from contractual settlements related to derivative transactions occurring over a 30 calendar-day period. These outflows and inflows can generally be netted at a counterparty level if subject to a valid qualifying master netting agreement. In addition, the liquidity standards require that NCOs reflect certain contingent outflows related to a firm's derivative positions that may arise during a 30 calendar-day stress scenario, including:

- Incremental collateral required as a result of a change in a firm's financial condition;
- Legal right of substitution of collateral posted to a firm for less liquid or non-HQLA collateral;
- Collateral required as a result of market movements. The liquidity standards require that a firm reflects in its NCOs calculation the absolute value of the largest net cumulative collateral outflow or inflow in a 30 calendar-day period over the last two years; and
- Excess collateral greater than the current collateral requirement under the governing contract that a firm may be contractually required to return to counterparty.

In the table below, "Outflows related to derivative exposures and other collateral requirements" reflects contractual derivative settlements, as well as contingent derivative outflows, calculated in accordance with the liquidity standards. Inflows from contractual derivative settlements are reflected in "Other cash inflows" (see Table 12). The liquidity standards do not recognise contingent derivative inflows.

The table below presents a summary of the GSGUK's derivative NCOs, calculated in accordance with the liquidity standards.

Table 10: Derivative Net Cash Outflows

$ in millions	Twelve months ended March 2026	
	Average Unweighted	Average Weighted
Outflows related to derivative exposures and other collateral requirements	$ 29,817	$ 22,150

Unfunded Commitments

Overview

GSGUK's commercial lending activities include lending to investment-grade and non-investment-grade corporate borrowers. Such commitments include commitments related to relationship lending activities (principally used for operating and general corporate purposes) and related to other investment banking activities (generally extended for contingent acquisition financing and are often intended to be short-term in nature, as borrowers often seek to replace them with other funding sources). The firm also extends lending commitments in connection with other types of corporate lending, commercial real estate financing, retail lending and other collateralised lending.

In addition, the firm provides financing to clients who warehouse financial assets. These arrangements are secured by the warehoused assets, primarily consisting of residential real estate, consumer and corporate loans.

Unfunded Commitments Net Cash Outflows

The liquidity standards apply outflow rates to the undrawn portion of committed credit and liquidity facilities that a firm has extended based on counterparty type and purpose. The undrawn portion is defined as the amount of the facility that could be drawn upon within 30 calendar days under the governing agreement, less the fair value of any liquid assets that serve as collateral, after recognising the applicable haircut for those assets. Commitments extended to non-financial sector corporates are prescribed an outflow rate of 10-30%, insurance sector entities an outflow rate of 40-100%, credit institutions an outflow rate of 40% and all others an outflow rate of 100%.

The table below presents a summary of GSGUK's NCOs related to our unfunded commitments, calculated in accordance with the liquidity standards.

Table 11: Unfunded Commitments Net Cash Outflows

$ in millions	**Twelve months ended March 2026**	
	Average Unweighted	**Average Weighted**
Credit and liquidity facilities	$ 6,714	$ 2,996

Other Net Cash Outflows

The table below presents a summary of GSGUK's other cash outflows and inflows, including, but not limited to, overnight and term funding from Group Inc. and affiliates, derivative inflows, unsettled inventory balances, loans of collateral to effect customer short sales and other prime brokerage services.

Table 12: Other Net Cash Outflows

$ in millions	**Twelve months ended March 2026**	
	Average Unweighted	**Average Weighted**
Outflows	**$ 238,424**	**$ 102,509**
Other contractual obligations	105,644	9,305
Other contingent funding obligations	132,780	93,204
Inflows	**$ 18,305**	**$ 18,305**
Other cash inflows	18,305	18,305
Net other cash outflows/(inflows)[1]	**$ 220,119**	**$ 84,204**

1. Net other cash outflows/(inflows) reflects the subtraction of the inflow amounts from the outflow amounts shown in the table above and is included for illustrative purposes.

20	**TOTAL CASH INFLOWS**	**$ 30,126**	**$ 28,468**	**$ 25,968**	**$ 24,028**	**$ 6,395**	**$ 6,111**	**$ 6,754**	**$ 7,485**
UK-20a	*Fully exempt inflows*	0	0	0	0	0	0	0	0
UK-20b	*Inflows Subject to 90% Cap*	0	0	0	0	0	0	0	0
UK-20c	*Inflows Subject to 75% Cap*	29,760	28,049	25,476	23,509	6,395	6,111	6,754	7,485
						TOTAL ADJUSTED VALUE			
UK-21	**LIQUIDITY BUFFER[1]**					**$ 33,285**	**$ 33,238**	**$ 32,924**	**$ 32,676**
22	**TOTAL NET CASH OUTFLOWS[1]**					**$ 21,663**	**$ 21,790**	**$ 21,244**	**$ 20,695**
23	**LIQUIDITY COVERAGE RATIO (%)[2]**					**154.16%**	**153.10%**	**155.57%**	**159.22%**

1. The amounts reported in these rows may not equal the calculation of those amounts using component amounts reported in rows 1-20 due to technical factors such as the application of the Level 2 liquid asset caps and the total inflow cap.
2. The ratios reported in this row are calculated as average of the monthly LCR's for the trailing twelve months and may not equal the calculation of ratios using component amounts reported in rows 21 and 22.

Leverage Ratio

The company is subject to the leverage ratio framework established by the PRA. The leverage ratio compares Tier 1 capital to a measure of leverage exposure, defined as the sum of certain assets plus certain off-balance-sheet exposures (which include a measure of derivatives, SFTs, commitments and guarantees), less Tier 1 capital deductions.

The framework sets a minimum leverage ratio requirement at 3.25% and additional leverage ratio buffers. Three-quarters of the minimum requirement must be met with CET1 capital instruments.

The table below presents a breakdown of the leverage ratio for GSGUK, GSI and GSIB as of March 31, 2026 as per the current framework.

Table 16: Leverage ratio common disclosure

$ in millions		Leverage ratio exposures					
		GSGUK	**GSI**	**GSIB**	**GSGUK**	**GSI**	**GSIB**
		As of March 2026			**As of December 2025**		
Capital and total exposure measure							
UK-24b	**Total exposure measure excluding claims on central banks**	**$ 1,071,016**	**$ 983,262**	**$ 89,084**	**$ 948,986**	**$ 884,835**	**$ 58,928**
Leverage ratio							
25	Leverage ratio excluding claims on central banks (%)	4.36%	4.22%	5.60%	4.75%	4.51%	8.39%
UK-25a	Fully loaded ECL accounting model leverage ratio excluding claims on central banks (%)	4.36%	4.22%	5.60%	4.75%	4.51%	8.39%
UK-25c	Leverage ratio including claims on central banks (%)	4.34%	4.20%	5.54%	4.70%	4.50%	7.40%
Additional leverage ratio disclosure requirements - leverage ratio buffers							
27	Leverage ratio buffer (%)	0.20%	0.20%	0.40%	0.20%	0.20%	0.40%
UK-27b	Of which: countercyclical leverage ratio buffer (%)	0.20%	0.20%	0.40%	0.20%	0.20%	0.40%
Additional leverage ratio disclosure requirements - disclosure of mean values							
UK-31	Average total exposure measure including claims on central banks	$ 1,039,390	$ 966,907	$ 76,163	$ 987,677	$ 918,206	$ 66,835
UK-32	Average total exposure measure excluding claims on central banks	$ 1,032,416	$ 960,888	$ 75,209	$ 974,650	$ 915,028	$ 56,985
UK-33	Average leverage ratio including claims on central banks	4.32%	4.12%	6.01%	4.47%	4.28%	6.83%
UK-34	Average leverage ratio excluding claims on central banks	4.35%	4.15%	6.09%	4.53%	4.29%	8.01%

GSGUK's leverage ratio decreased from 4.75% in December 2025 to 4.36% in March 2026 primarily driven by an increase in on-balance sheet exposures mainly within SFTs.

Cautionary Note on Forward-Looking Statements

We have included in these disclosures, and our management may make, statements that may constitute "forward-looking statements". Forward-looking statements are not historical facts or statements of current conditions, but instead represent only our beliefs regarding future events, many of which, by their nature, are inherently uncertain and outside of our control. These statements may relate to, among other things, (i) our future plans and results, (ii) the objectives and effectiveness of our risk management and liquidity policies, and (iii) the effect of changes to the regulations, and our future status, activities or reporting under banking and financial regulation. See "Forward-Looking Statements" in Part I, Item 2 "Management's Discussion and Analysis of Financial Condition and Results of Operations" in the Quarterly Report on Form 10-Q for further information about forward-looking statements.

It is possible that our actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition in these forward-looking statements. Statements about the estimated impact of capital rules are subject to change as the company implements them and is subject to the risk that the final rules change and that the company's balance sheet composition will change. As a consequence, the company may estimate incorrectly the actual impact of the final rules. Important factors that could cause our actual results and financial condition to differ from those in these statements include, among others, those discussed in "Risk Factors" in Part I, Item 1A in the firm's 2025 Form 10-K.
